I would like the board to make a simple and efficient renewable energy plan with these features:

1. no permits or fees required for any renewable project in any town
2. only 1 inspection for each project , not multiple agency inspections.
3. a simple online application that is 1 page with a quick and efficient automatic online tracking method.
4. a rebate that is easy to understand and that is based on the amount of renewable energy generated from a project, not a projected amount. A system that is similar to NJ's rebate with REC payments would be best if it were teamed with a statewide financing option which can be put in your property tax such as PACE.
5. a home property tax credit equal to the cost of the renewable project to the owner at year 1.
6. A rebate that is adjustable with the times and one that is easily modified to take new developments into account.
7. Right now there is toooooo much work required to get a solar system up, you need to cut this down into a 10 min app, and automatic rebate payments that are quick. We can help you do it, just call us. Ask for our comments on a message board all the time so you see what is wrong and what is right.
