

**Witness: CL&P Panel  
Request from: Connecticut Energy Advisory Board**

**Question:**

Page IV-4 of the Municipal Consultation Filing (“MCF”) states that the need for the GSRP is based upon a study titled “Southern New England Transmission Reliability Report 1 January 2008” (referred to as the “Needs Analysis”). Does CL&P possess any other studies, reports or assessments that evaluate, examine or summarize the need for this project? If so, please provide.

**Response:**

Other studies, reports, or assessments that evaluate, examine, or summarize the need for the GSRP are identified in the following table. Most of these documents are probably already in the possession of the CEAB, as they are posted on the ISO-NE Website; relate to presentations attended by CEAB’s consultants; or were addressed to the CEAB. Accordingly, to avoid duplication, additional copies of such documents are not provided with this response. However, should CEAB find that it does not have, or can not easily obtain, any of these documents, CL&P will provide copies on request. The eight documents provided with this response will be delivered in hard copy (one each, labeled Bulk Attachments 1 through 8) and collectively on a CD.

\* These documents were also included in Volume 4 of the Municipal Consultation Filing which was provided to CEAB on June 16, 2008.

\*\* The ABB Draft Report dated February 15, 2005 was incorrectly dated. It was actually produced on February 15, 2006.
