I have reviewed the proposed energy policy.

It was written before the IPCC email problems were announced.

It is already outdated.

Please add my name to those who have changed their minds, and no longer see CO2 as a problem.

I do not endorse borrowing more Connecticut funds and paying interest to reduce CO2 emissions. There is no basis for AGW.

I am also canceling my Sterling Planet extra on my electric bill, because I do not think my town with 130 subscribers should be sending our \$8000 per year to midwest wind companies.

It used to be cool to be green, and want to solve unemployment problems by blaming people for producing CO2.

But 2010 will see the progressive hip people criticizing Pachauri, Gore and other CO2 profiteers. Green lies are so yesterday.

Let's not further wreck CT's economy by being on the wrong side of this issue.

Thank you for reading this.

I would be pleased to follow up as you may request.

Pete Tavino, CT LEED AP
